

Test results obtained from an independent, unpublished *in vitro* experiment conducted within the Blokhin Cancer Research Center, at the Russian Academy of Medical Sciences, in Kashirskoe Shosse, Russia. The randomized and controlled *in vitro* study assessed the effects of 4Life Transfer Factor® Classic, 4Life Transfer Factor® Formula, or 4Life® Transfer Factor Plus® Tri-Factor® Formula, versus a positive control (Interleukin-2, or IL-2) on NK cell activity and effectiveness in destroying damaging cells. Blood was collected from healthy volunteers and then incubated for up to 48 hours. (REFERENCE: Kisielevsky MV & Khalturina EO. Antitumor and cytotoxic activity of mononuclear blood cells. *Unpublished observations*)
